Maximum flow rate 80 litres/min

4 year warranty

DAB

Model	Warranty	Flow Rate	Max. Head	Outlets
Esybox Mini 3	4 Years	80 L/min	50 m	Up to 8

Essential Site Preparation

Please follow this brief guide for the correct base preparation to ensure a correct foundation is laid for your Maxiplus Rain Water Tank.

Please note that damage resulting from improper tank base preparation or movement is not covered by the warranty. Please consider that 1,000L of water weighs 1,000kg, keeping in mind that your Rain Water Tank can weigh up to 400kg and this is a significant force. Inadequately prepared foundations may not support the weight of a full tank, leading to potential subsidence.

Please note that Maxiplus accepts no responsibility for tank base failure.

Note: Incorrect site preparation or installation may void your warranty.

Concrete Base

A concrete slab is the most suitable base for your Maxiplus Rain Water Tank

A minimum concrete thickness of 100mm is required for constructing the base

For tanks positioned on sloped terrain, the slab thickness should be increased to a higher grade

The slab must be flat, smooth and level

Slabs must be large enough to support all edges of the tank, and should be at least 100mm longer and wider than the tank

Crusher Dust Base

Crusher dust bases are preferred for larger diameter round tanks

The crusher dust must have no particles larger than 5mm diameter

The crusher dust is to be 100mm thick

It must be compacted, level and flat

Install a border around the crusher dust to prevent erosion from heavy rain

The base should be large enough to support all edges of the tank

Tank may be filled straight away

Sand is not a suitable alternative

Note: Care must be taken when positioning the tank on a crusher dust base. This will ensure it does not dig in and create an uneven surface.

Delivery Requirements

Upon ordering a Maxiplus Rain Water Tank 10,000 Litres and above, please complete the following check list:

Site access must be free of overhead obstructions (tree branches or powerlines)

Sufficient turning area and parking must be available for a truck and trailer with approximate length of 18 metres

Ensure that surfaces are flat, firm, and dry

If there are any unsafe work conditions, please inform Maxiplus

Note: Weather conditions, including high winds and precipitation, may cause delivery delays

It's essential that a sufficient number of adult able bodied person(s) are available to assist the Maxiplus driver with delivery of your Maxiplus Rain Water Tank. This will ensure no breaches of occupational health and safety.

Slimline tanks - 1,000L - minimum of ONE able bodied person who can assist.

Slimline tanks - 2,300L - minimum of TWO able bodied person who can assist.

Slimline tanks - 3,000L - minimum of THREE able bodied persons who can assist.

Slimline tanks - 5,000L - minimum of FOUR able bodied persons who can assist.

Round tanks - 5,000L and below - minimum of ONE able bodied person who can assist.

Round tanks - 10,000L and 15,000L - minimum of TWO able bodied person who can assist.

Round tank - 22,500L - minimum of THREE able-bodied persons who can assist

Note: This is excluding the Maxiplus Driver. Please be advised that insufficient assistance onsite may delay the delivery.

Please ensure children, pets and animals are kept well clear during unloading.
